

Excellent logistics

With more than one million cooling units delivered per year, we supply your success

In a globalized market, efficient logistic solutions are the key to a profitable business. We recognize this necessity by building a strong logistics network offering quick, flexible and reliable solutions.

The widest cooling and climate range available from one supplier, just around the corner!

Nissens
DELIVERING THE DIFFERENCE

Excellent logistics - supreme product availability,

Your need is our priority

We offer you a logistic setup that is completely aftermarket driven. Our aim is to focus on your needs, and that is why our logistics concept offers you flexible solutions making your business more efficient and profitable. The concept bases on four key elements:

Nissens' Logistics Concept

Product availability

- Supreme product availability (>95%)
- More than 10,000 products
- From fastmovers to unique slowmovers
- Local distribution centres optimized to the local car park

Reliable deliveries

- European deliveries guaranteed within 24h
- Network of 22 distribution centres strategically located
- Strong, solid carton boxes
- Fast order handling

Constant cost optimization

- Efficient pallet packing
- Fully automated picking and wrapping
- Customer stock management
- ERP integration
- Cross docking
- TecCMI

100% Flexibility

- From express deliveries to full container/truck shipments
- Aftermarket-driven production setup
- Customization of labels and pallets
- Experienced customer service staff

Customer benefits:

- Reduced tied-up capital
- Increased storage capacity
- Reduced lost sales
- High service level
- Less transaction costs
- Minimum risk of transport damages

Optimization

We constantly focus on optimization, and we invest in the newest automatic equipment. Investing in our supply chain enables us to keep the speed high and the costs low in the logistic processes. Our team of professionals thoroughly analyses which fields of the logistic setup can be improved and optimized. The examples below present implemented optimizations:

Pallet space utilization optimized by 33%

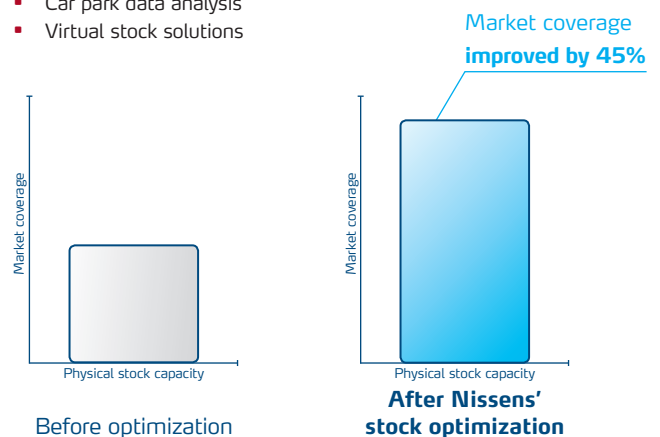

Due to intelligent packing of the pallet volume, we are able to utilize the truck space height optimally, thus decreasing the freight costs. The example of a pallet with Volkswagen radiators (Nissens no. 652011) shows the difference between a standard space usage and the Nissens method to utilize the given volume.

Customer stock covering more of the market

Our advanced tool of Customer Stock Optimization enables you to obtain a better result in your local market coverage. Without changing the physical capacity of a stock, we can in some cases increase the local market application coverage up to 45%. Examples of Customer Stock Optimization tools:

- ABC analysis
- Car park data analysis
- Virtual stock solutions

high-speed deliveries, and cost-efficient solutions

Nissens' delivery concept

With the most up-to-date and intelligent warehousing technology, 17 sales companies, 22 distribution centres and advanced sales channels, Nissens guarantees supreme product availability and quick delivery.

Our delivery concept offers a wide variety of different transportation methods and time, depending on the required speed and the product type, and in consideration of the optimum cost efficiency.
